Every company is on a journey to become a Frontier Firm

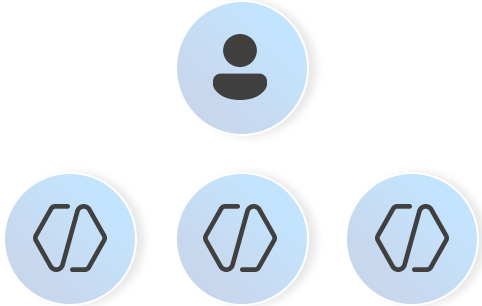
Phase 1

Human with assistant

Drive AI skills in your organization with Copilot Adoption Community

Phase 2

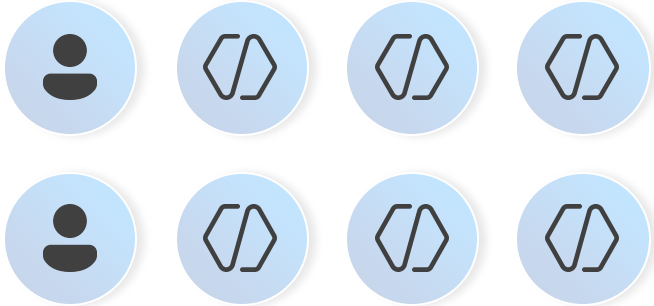
Human-led agents



Work alongside the community agent in Engage to support communities proactively

Phase 3

Human-led, agent-operated



Set direction for the community agent to auto-post responses, checking in as needed

Discussion

Where is your organization in your AI Adoption Journey?

What are the biggest obstacles people are facing in using AI more?

How intentional is your organization about AI adoption and upskilling?

Communities are a critical enabler for aspiring frontier firms

Peer-to-Peer learning

The most valuable information in a workplace is often unwritten or hard to capture. Active communities connect employees across roles, departments, and geographies—enabling all employees to easily share knowledge.

Connecting with experts

Communities capture and share expert insights, making knowledge accessible and actionable for everyone. AI then uses this collective expertise to deliver answers at scale and amplify impact across the organization.

The community toolkit for frontier firms

Copilot Adoption Community

Kickstart Copilot adoption with ready-to-use communities

Agents in Communities

Scale expertise and save time with AI-powered answers

Available with Microsoft Copilot license

Microsoft 365 Copilot in Engage

Boost productivity and engagement with AI assistance

Available with Microsoft Copilot license

Engage content in Copilot chat responses

Unlock organizational knowledge for everyone

Available with Microsoft Copilot license

Champions & Experts

Champions normalize AI use

- Shape culture and model good posting + Copilot habits
- Encourage peers and spark participation
- Build momentum across communities

Experts make content trustworthy

- Validate answers and raise correctness + trust
- Handle nuanced, technical questions
- Partner with AI agents to refine responses

Together: They form the human scaffolding that powers sustainable AI adoption

Community Experts in Viva Engage

Build trust, validate knowledge, and make answers easier to find

Trusted designation

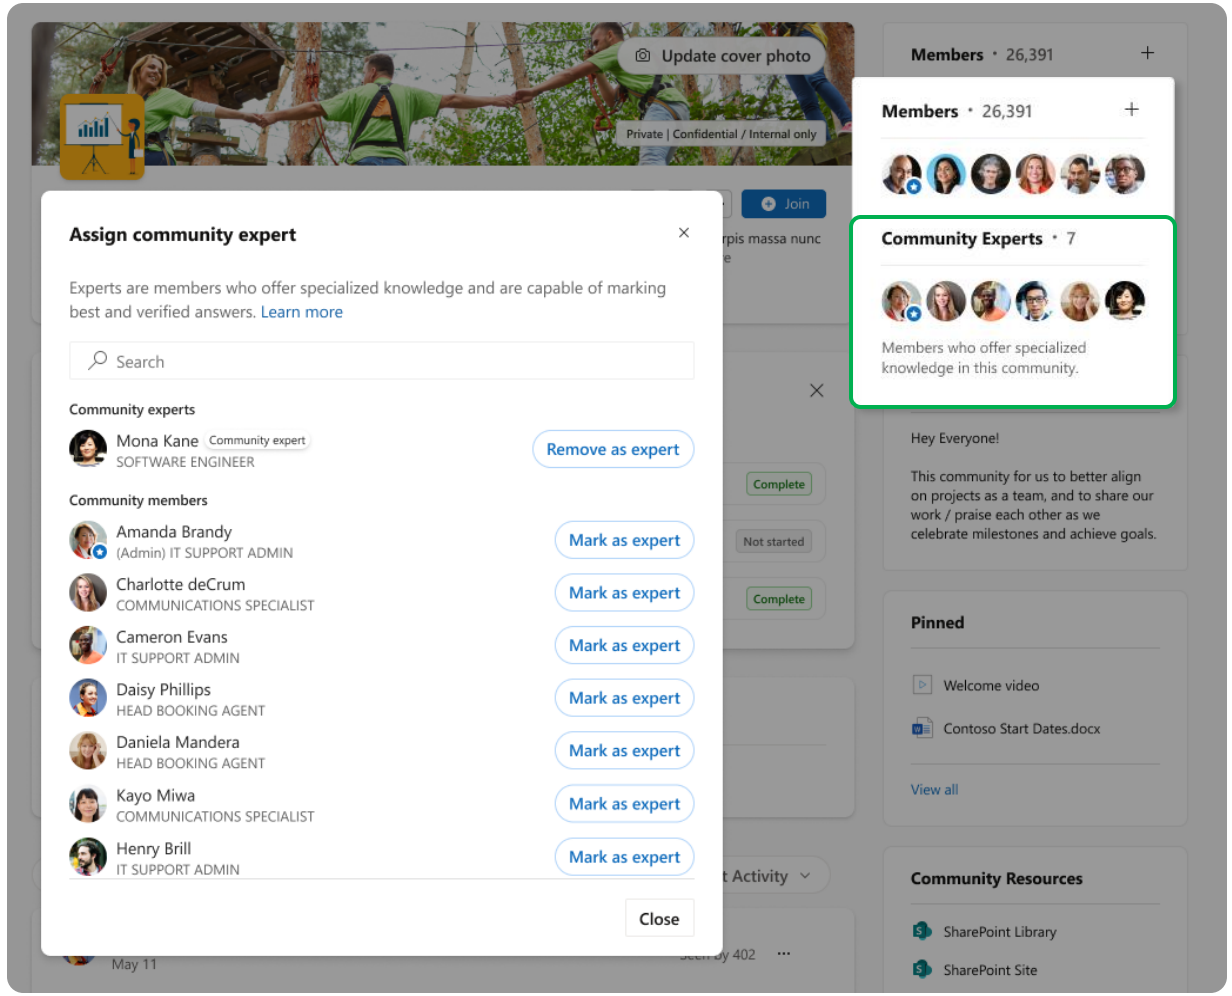
Community admins assign experts; the Community Expert label appears next to their name in that community and in the Experts section

Quality signals in Q&A

Experts can mark Best answer and apply Verified to highlighted trusted content

Surface official guidance

Experts can pin key posts so authoritative guidance stays easy to find and repeat questions drop



Agents in Communities

Scale expertise and save time with AI-powered answers

Grounded, contextual answers

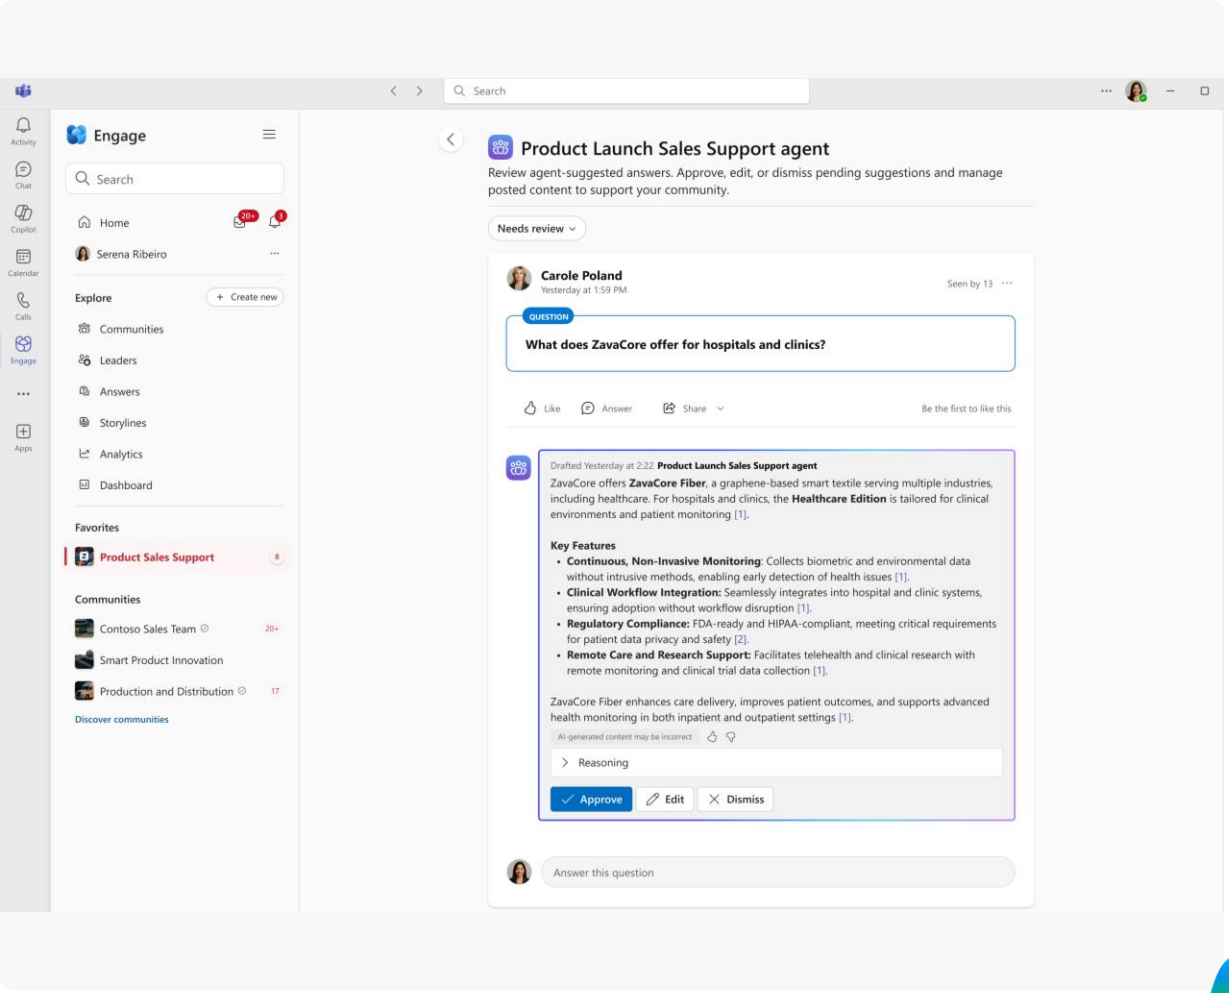
Delivers relevant responses using the community's conversations and SharePoint files*

Proactive & transparent

Automatically drafts answers to open questions, backed by deep research, reasoning, and references for transparency

Expert review & verification

Admins and experts can review, edit or auto-post responses; approved answers are automatically marked "Verified" to build trust



**Agents can ground on files in the community's SharePoint library. Grounding on SharePoint sites outside community coming soon*

Available in public preview and requires Microsoft 365 Copilot license

Demo

Agents in Communities

What we have shown so far!

Community Agent Setup

Control agent actions – auto-post and expert review. Pause, resume or remove agent.

SharePoint Grounding

Specify a SharePoint site outside community for FAQs and relevant content. Sensitivity labels*

Proactive answering

Automatically drafts answers to open questions, backed by deep research, reasoning, and references for transparency

@-mention the agent

Ask questions mid-conversation - follow up, ask for context and more. Can be done on any conversation, not limited to question posts

Expert review & verification

Admins and experts can review, edit or auto-post responses; approved answers are automatically marked “Verified“ to build trust

*Guardrails in place for access and sensitivity labels (coming soon)

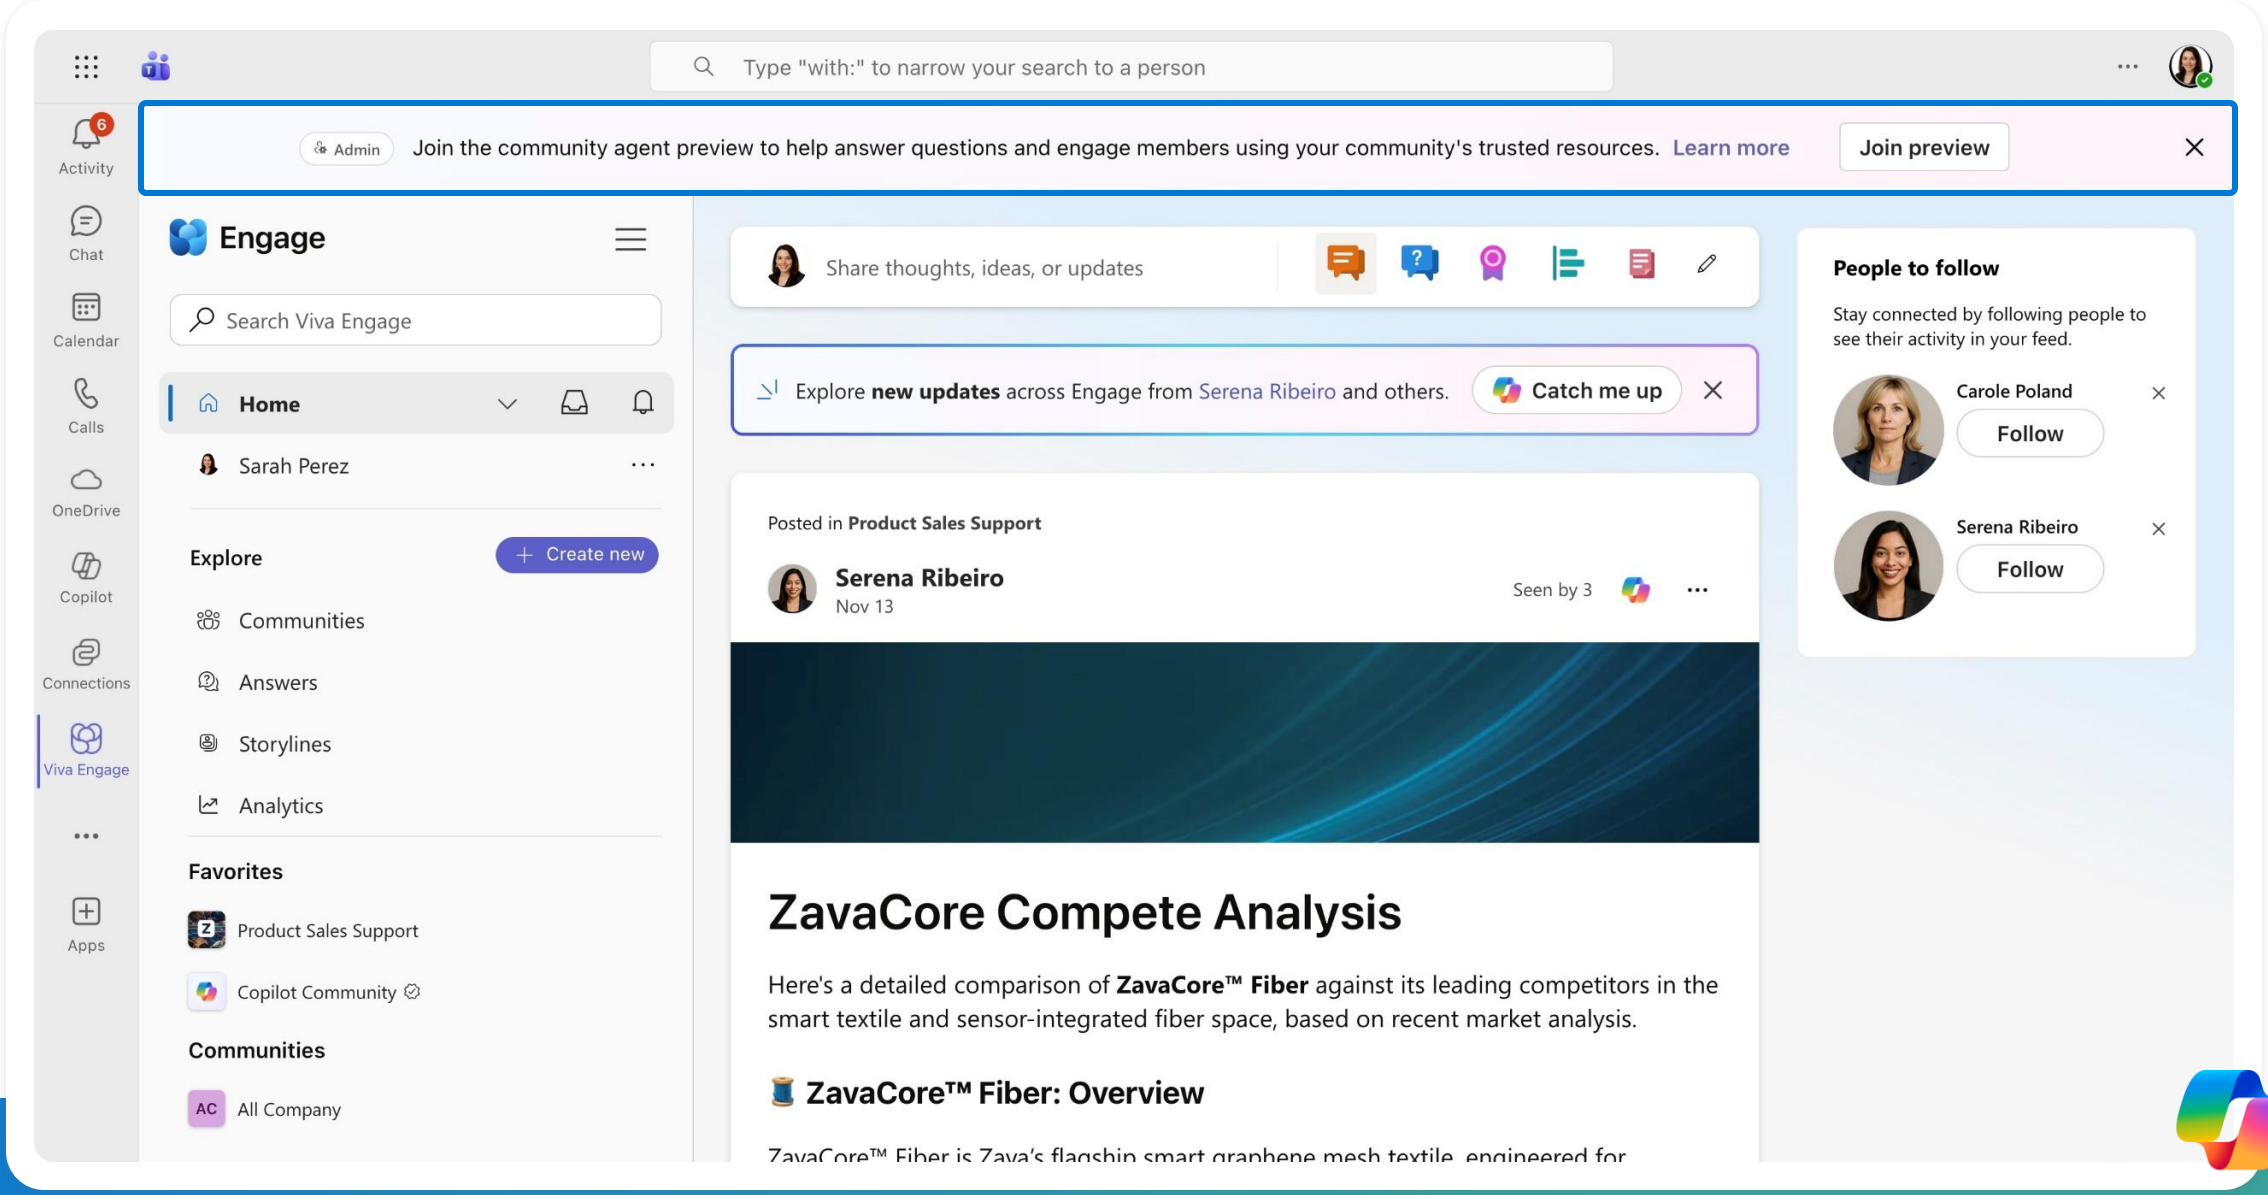
Available in public preview and requires Microsoft 365 Copilot license

Discussion Question

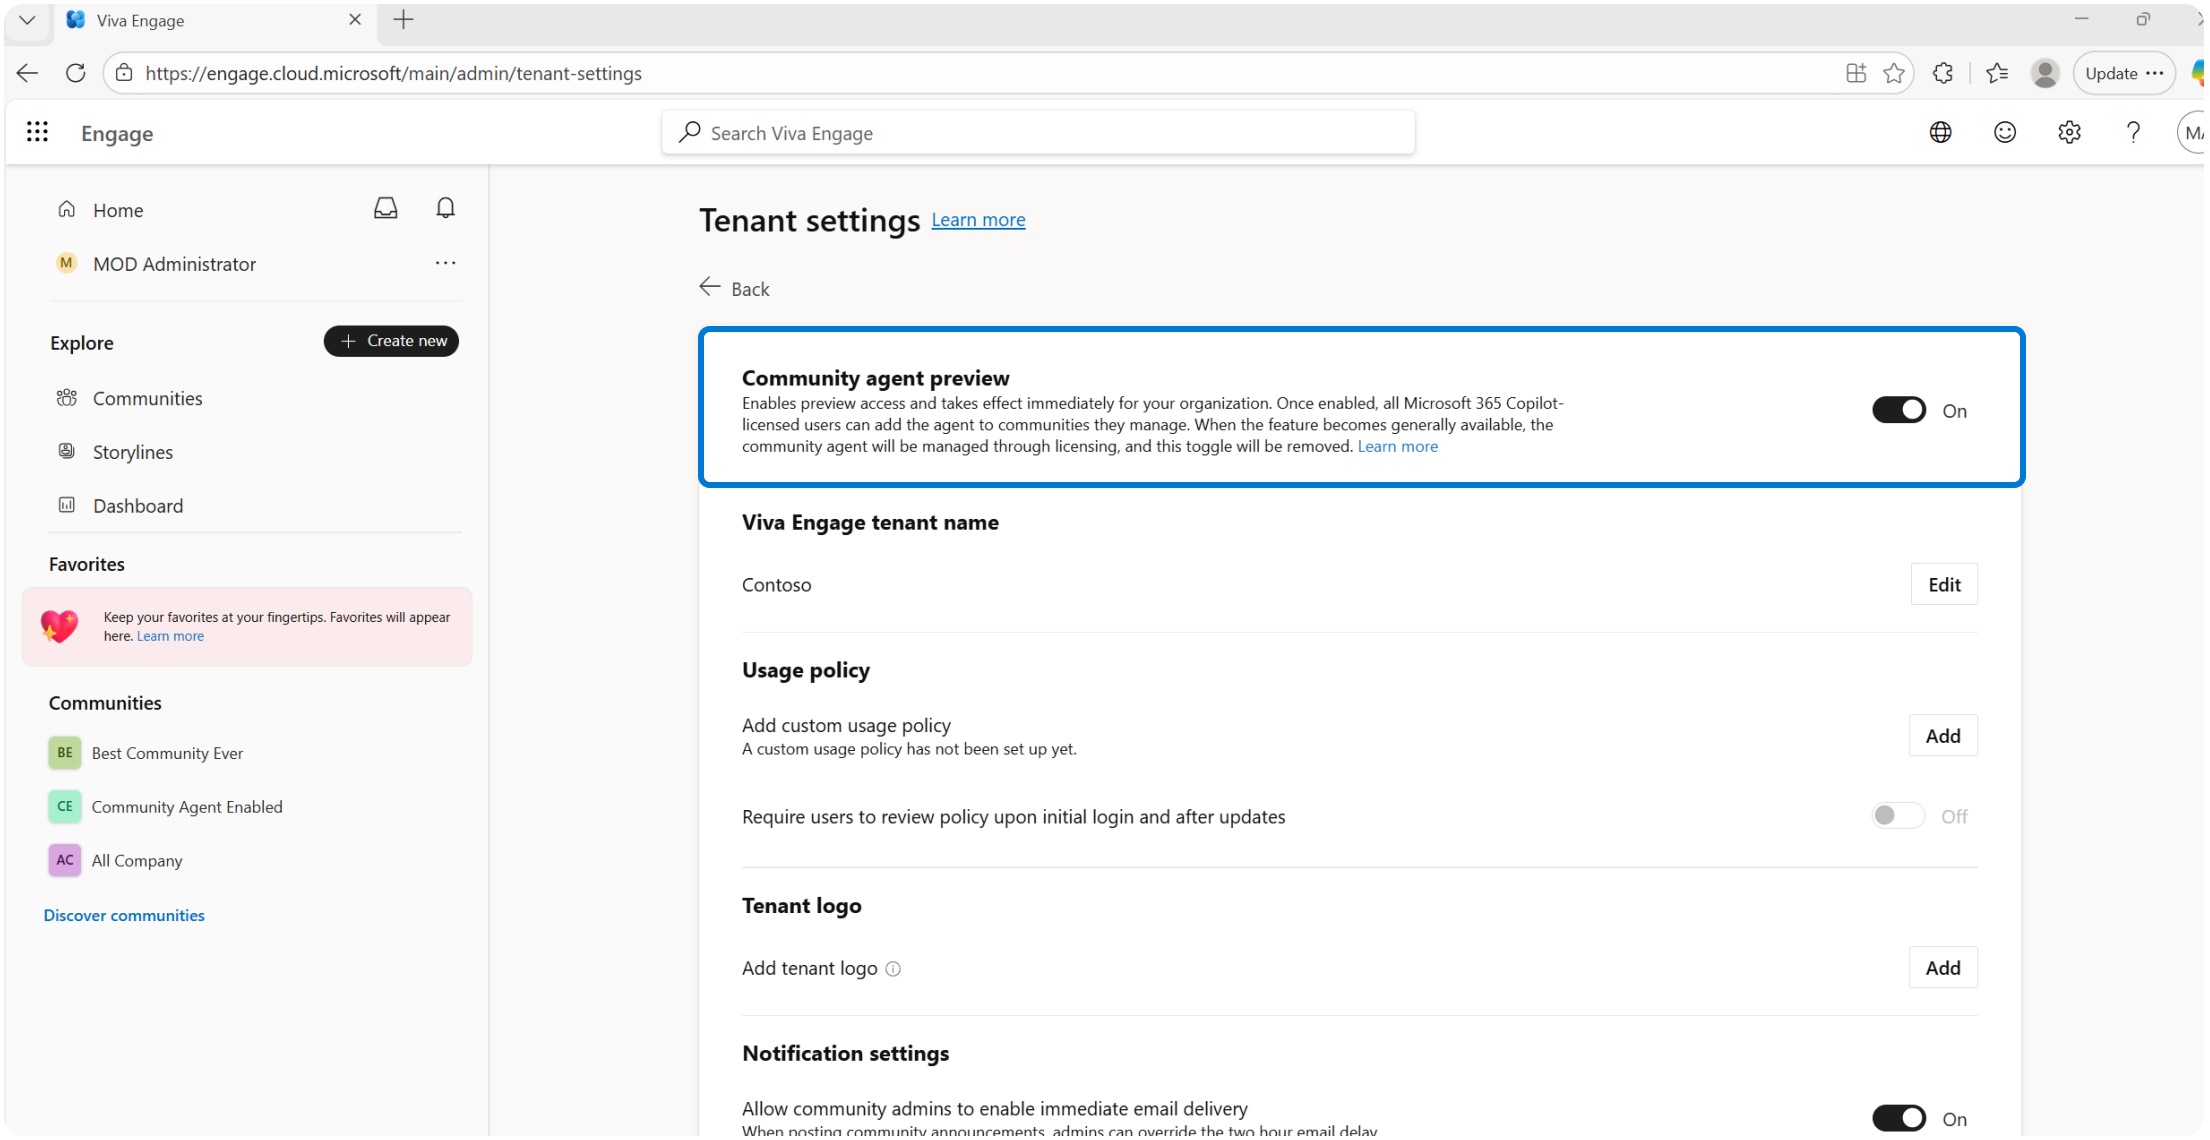
Please raise your hands or comment in the chat!

Which of these capabilities would make the biggest difference in your organization today?

Join the Community agent preview!



Enable “Community agent preview“ in Engage admin

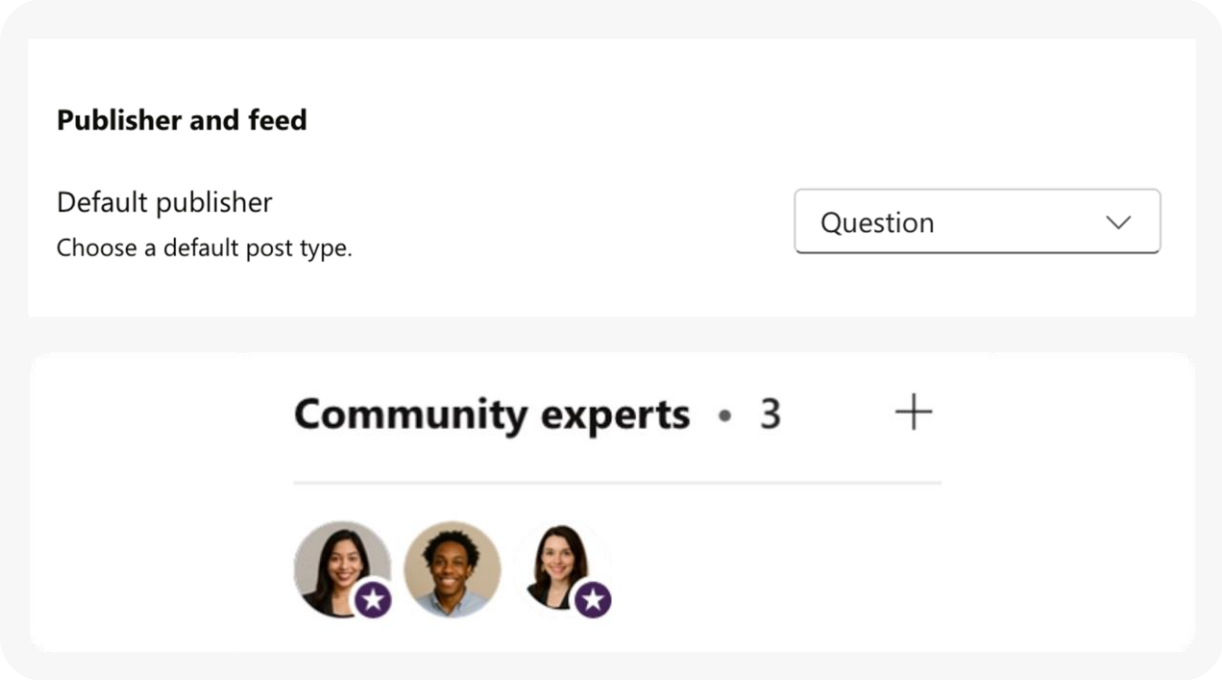


Prepare your community

Set Default publisher = Question to boost answerable posts; the agent picks up ‘Question’ posts

Assign Community Experts to review answers and mark Verified

Capture baseline Q&A metrics before rollout to measure impact later

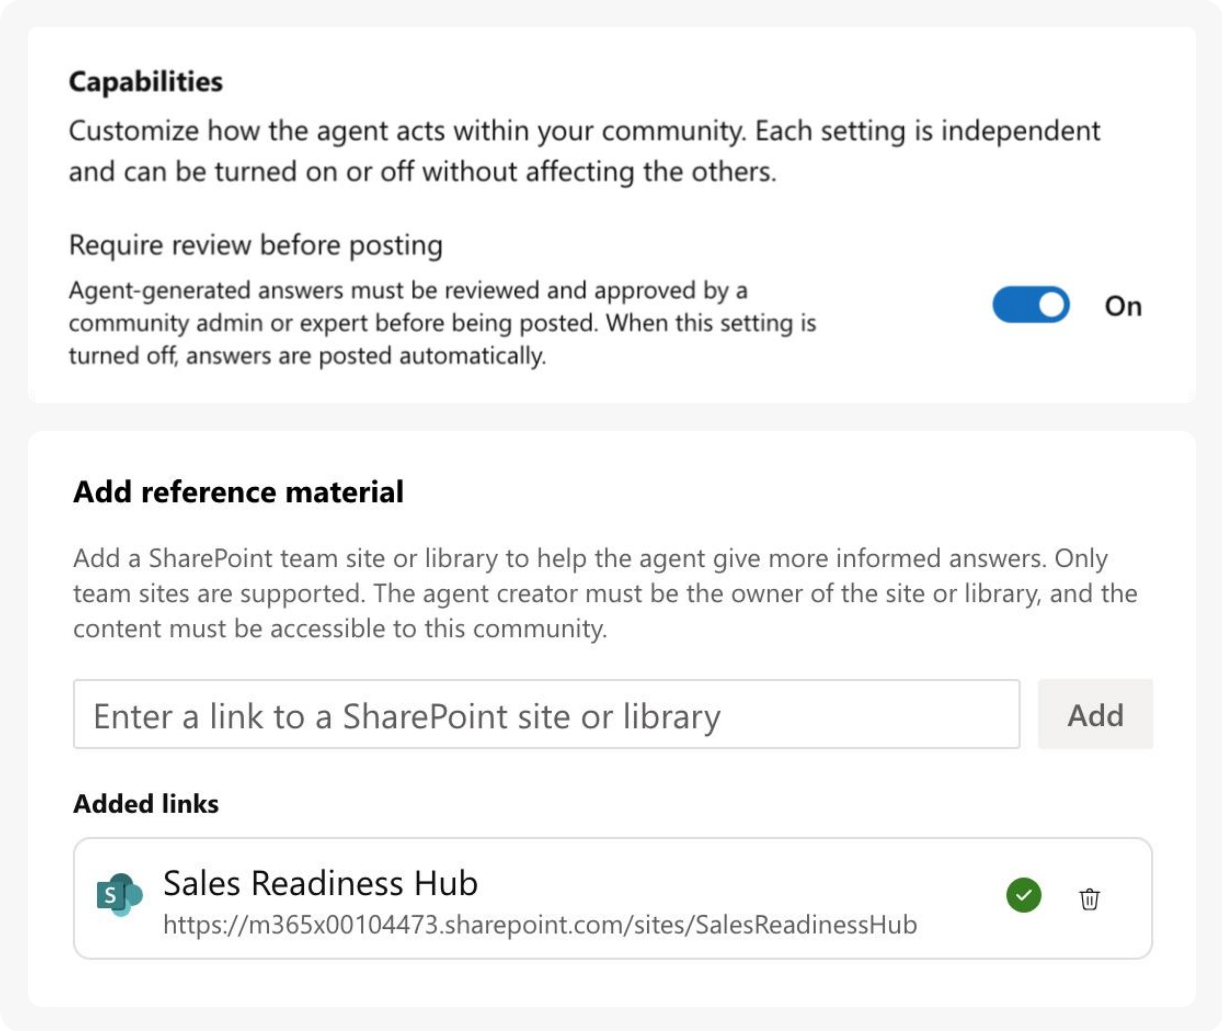


Configure the community agent

Consider requiring a review before posting to get a feel for the agent's answers first

Add SharePoint sources your community relies on most*

*You need to be an admin/owner of both the community and SharePoint site to do this



Announce, verify and measure

Announce the agent

Share how it works, what sources it uses, who reviews (if enabled), and your review cadence

Promote use of “Verified“

Encourage experts/admins to apply it so members quickly learn what to trust

Track results vs. baseline

Time-to-answer, % answered

Announcement

Sarah Perez Community expert
3m ago

We're excited to share that our community is previewing the Community Agent!

It is an AI assistant designed to help answer questions in our community. It uses our community's knowledge from past conversations and provides grounded, reference-backed responses to questions that haven't been answered yet.

What to expect

- The agent checks for unanswered questions every **15–20 minutes**
- It responds to recent questions (from the past **14 days**) that don't already have a "Best" or "Verified" answer
- Uses **our community conversations** and **approved SharePoint sites/files** as grounding sources
- In this preview, **admins and designated experts review** every draft before it’s posted (approve, edit, or dismiss)

Discussion Question

Please raise your hands or comment in the chat!

What would need to be true for you to confidently try the community agent in your tenant?”
